

Creekside Park – Construction Update

The reinforced concrete trail from the parking lot down to the sediment control pond is substantially complete, and Urban Drainage and Flood Control District has started repairing the irrigation system within the park.

Please exercise caution around the construction area. A portion of the Piney Creek Trail may be closed to accommodate this work.

Once the irrigation system is fully functional, Urban Drainage will then begin installing sod and complete all other plantings within the park. The final phase of this project will include Urban Drainage making any necessary repairs to the parking lot.

Urban Drainage plans to begin installation of the sod by the end of next week.

If you have any questions please email them to clekahal@wbapc.com. Thank you.
